Appligent releases StampPDF Batch 3.0

[Appligent](#) announced last week that it has updated its StampPDF Batch software, a server-based application that can automatically stamp text and images on large batches of PDF documents. New to the 3.0 version is myriad stamping features, including watermarking for PDF as well as TIFF images, regardless of whether they are in the RGB or CMYK color spaces.

"StampPDF Batch 3.0 is designed to be a part of a complete document production solution that companies can use to modify PDF files," says Virginia Gavin, president of Appligent. "Appligent's product line allows companies to automate their document assembly process, allowing documents to be produced with greater speed and accuracy, and with significant cost savings."
